Oracle Application Development Framework 12c Essentials

**Answer:** A, B

**QUESTION:** 81

A backing bean for a page must hold its value over multiple requests for the current user. Which three bean scopes are applicable? (Choose three.)

- A. requestScope
- B. backingBeanScope
- C. viewScope
- D. pageFlowScope
- E. sessionScope
- F. applicationScope

**Answer:** C, D, E

**QUESTION:** 82

Identify three actions you can perform by entering a URL in a browser address bar. (Choose three.)

- A. Navigate to a specific page in an unbounded task flow.
- B. Navigate to the first page in a bounded task flow with page fragments.
- C. Navigate to a page in a bounded task flow with regular pages.
- D. Navigate to the second page in a bounded task flow with regular pages.
- E. Pass parameters to a bounded task flow with regular pages.

**Answer:** B, C, E

**QUESTION:** 83

Which two statements describe the role of Oracle Application Development Framework (ADF) in Oracle's next-generation Fusion business applications? (Choose two.)

- A. Oracle ADF is primarily a PL/SQL framework used for developing enterprise business applications such as Oracle's next-generation Fusion business applications
- B. Oracle ADF is used by Oracle to develop Oracle's next-generation Fusion business applications.
- C. Oracle ADF provides a common development framework that is built on Java standards and can be deployed to Oracle Fusion Middleware.
- D. Oracle ADF is used only for developing Oracle's next-generation Fusion business applications.

**Answer:** B, C

**QUESTION:** 84

Which statement is true about creating a method at the application module level?  
(Choose the best answer.)

- A. You cannot create methods at the application module level.
- B. Application module methods provide an interface for the view layer to call custom business logic that may work across multiple data views.
- C. Application module methods are best suited to writing validation logic for entity objects.
- D. Methods in an application module allow you to manipulate UI components in the ViewController project
- E. Because ADF provides no way at run time to automatically create or delete view object records, you must create application module methods to do this.

**Answer:** B

**QUESTION:** 85

View the Exhibit

How would you implement functionality to display product details in a separate window when users place their cursors over a link in the table? (Choose the best answer.)

- A. Create detail components in an afpopup component. Add afshowPopupBehavior to the link within the table and set the PopupId to the ID of the pop-up.
- B. Create detail components in an afdialog component. Add afshowPopupBehavior to the link within the table and set the PopupId to the ID of the dialog.
- C. Create detail components in an afpopup component. Add afshowPopupBehavior to the link within the table and set the PopupId to the ID of the pop-up.

- D. Create detail components in an afpanelForm component. Add af:showPopupBehavior to the link within the table and set the PopuPld to the ID of the pari-
- E. Create detail components in an afdialog component. Add af:clientAttribute elements to the link within the table. Create af:setPropertyListener componer

**Answer:** C

**QUESTION:** 86

Which three options are available in the ADF Controller that are not available in the generic JSF 2.0 controller layer? (Choose three.)

- A. pageflow scope: a memory scope for managed beans that is available for several pages (longer than a request scope and shorter than a session scope)
- B. ability to break the page flow of an application into multiple files
- C. subflows that can be included as regions inside a page
- D. method calls as part of the definition of a page flow
- E. defining managed beans that contain references to components on a page

**Answer:** A, C, E

**QUESTION:** 87

You create a new ADF Faces page called emp.jspx and bind some data controls to that page. You notice a file called empPageDef.xml. What is this file for? (Choose best Answer)

- A. it is the page definition that contains the XML representation of the page layout and the components on that page.
- B. it is a template file into which you can write any managed bean code.
- C. it is the page template definition file that represents the chosen quick start layout.
- D. it is the file that contains the definition of the bindings to your data-bound components.
- E. it defines the binding context for all pages in your application.

**Answer:** D
